Biogrow offers tried and tested Eco-Friendly/Organic products for nurseries, growers and garden centres. Products are available in both commercial quantities and retail packaged sizes depending on requirement and industry sector.

We look to provide integrated growing solutions that benefit customers whilst saving them money. Our range of Biogro certified products offer genuine sustainable alternatives across all sectors and business size; whilst improving long term soil and environment inputs.

Our **New NT Fertilpots** will be at the show. These have an improved design in larger sizes, with a contoured pot lip for easier automated usage and de-stacking. In addition, the NT pots are more compressed as part of the manufacturing process improving pot durability and structural integrity.

We're also keen to talk to any growers and retailers about our initiative to drive the reduction of plastic pots in our industry and environmentally friendly alternatives. If you want to know more we'll be happy to talk, just come and see us.

Key products include:

Biodegradable Fertilpots; Fertiss Plugs; Bamboo Biochar Fertiliser; DEBug Insect Dust; DEGranules; Bamboo Vinegar Liquid; Natural Organic Fertiliser; Ecofelt Grow Bags; Wool Biomats; Bamboo Fibre Gloves.
