

Daltons T28 Propagation Trays

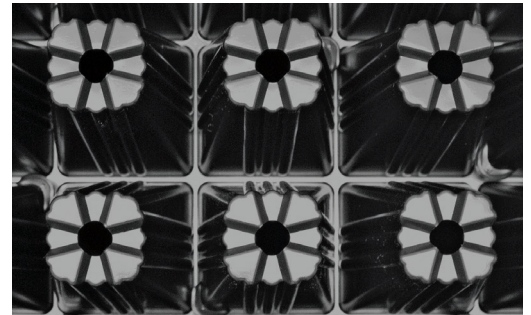

For growing
Native
seedlings
and forestry

QPD-L28T/15.5

- Designed with strong root ribs to eliminate root spiralling, achieving a compact fibrous root system.
- The high quality and rigidity allow for efficient handling, filling, seeding and plant extraction.
- All trays nest well and built-in destacking lugs ensure easy separation of trays by hand or by machine.
- Large base holes to allow easy plant removal with the use of a push-out plate.

New and improved
Cavity Revegetation Tray

New 'CUT IN ARCH' cell base...

- Ensures excellent drainage and oxygen supply.
- Allows stacking of trays on top of each other without damaging mix and seed in filled trays.
- Improves tray transportation.
